EARTHWORK SUMMARY:

THE EARTHWORK SUMMARY IS PROVIDED AS A COURTESY AND CONVENIENCE TO THE CONTRACTOR. THE EXCESSES OR SHORTAGES SHOWN ARE APPROXIMATE CALCULATED QUANTITIES BASED ON THE DIFFERENCES BETWEEN EXISTING GROUND ELEVATIONS AND ROUGH GRADE ELEVATIONS. FOR THIS REASON AND BECAUSE OF VARIABLES SUCH AS COMPACTION, SHRINKAGE AND THE CONTRACTOR'S METHOD OF OPERATION, THE VOLUME OF DIRT MOVED IN THE FIELD WILL IN ALL LIKELIHOOD DEVIATE TO SOME EXTENT FROM THE CALCULATED VOLUME. THE EARTHWORK SUMMARY DOES NOT RELIEVE THE CONTRACTOR OF THEIR RESPONSIBILITY REQUIRED TO DETERMINE FOR THEMSELVES THE QUANTITY OF EARTHMOVING THAT WILL BE REQUIRED TO ROUGH GRADE THIS JOB. IT IS UNDERSTOOD THAT THE CONTRACTOR'S BID PRICE FOR ROUGH GRADING THIS JOB IS BASED ON THE CONTRACTOR'S OWN EARTHWORK ESTIMATE AND INCLUDES PROVISION FOR ANY GRADE ADJUSTMENTS REQUIRED TO BRING THE JOB TO THE ROUGH GRADE, AS DEFINED ON THE PLANS.

AREA	ESTIMATED CUT (CY)	ESTIMATED FILL (CY)
RAW COMPUTER RESULTS	3,700	1,500
SHRINKAGE (SEE NOTE 1)	0	1,100
TRENCH SPOILS (SEE NOTE 2)	4,000	0
TOTAL	7,700	2,600
EXPORT	5,100	

THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE IMPORT / OFFHAUL TO BALANCE THE SITE.

NOTES:
1. BASED ON SIMILAR PROJECTS IN THE VICINITY OF THIS SITE, A SHINKAGE OF 30% IS ANTICIPATED.
2. TRENCH SPOILS ARE CALCULATED FOR GRAVITY PIPES ONLY AND ANTICIPATE A TRENCH SECTION OF THE PIPE DIAMETER PLUS 6" ON EITHER SIDE NON-NATIVE BACKFILL TO THE PIPE CROWN.

PROJECT NO. 25257.D
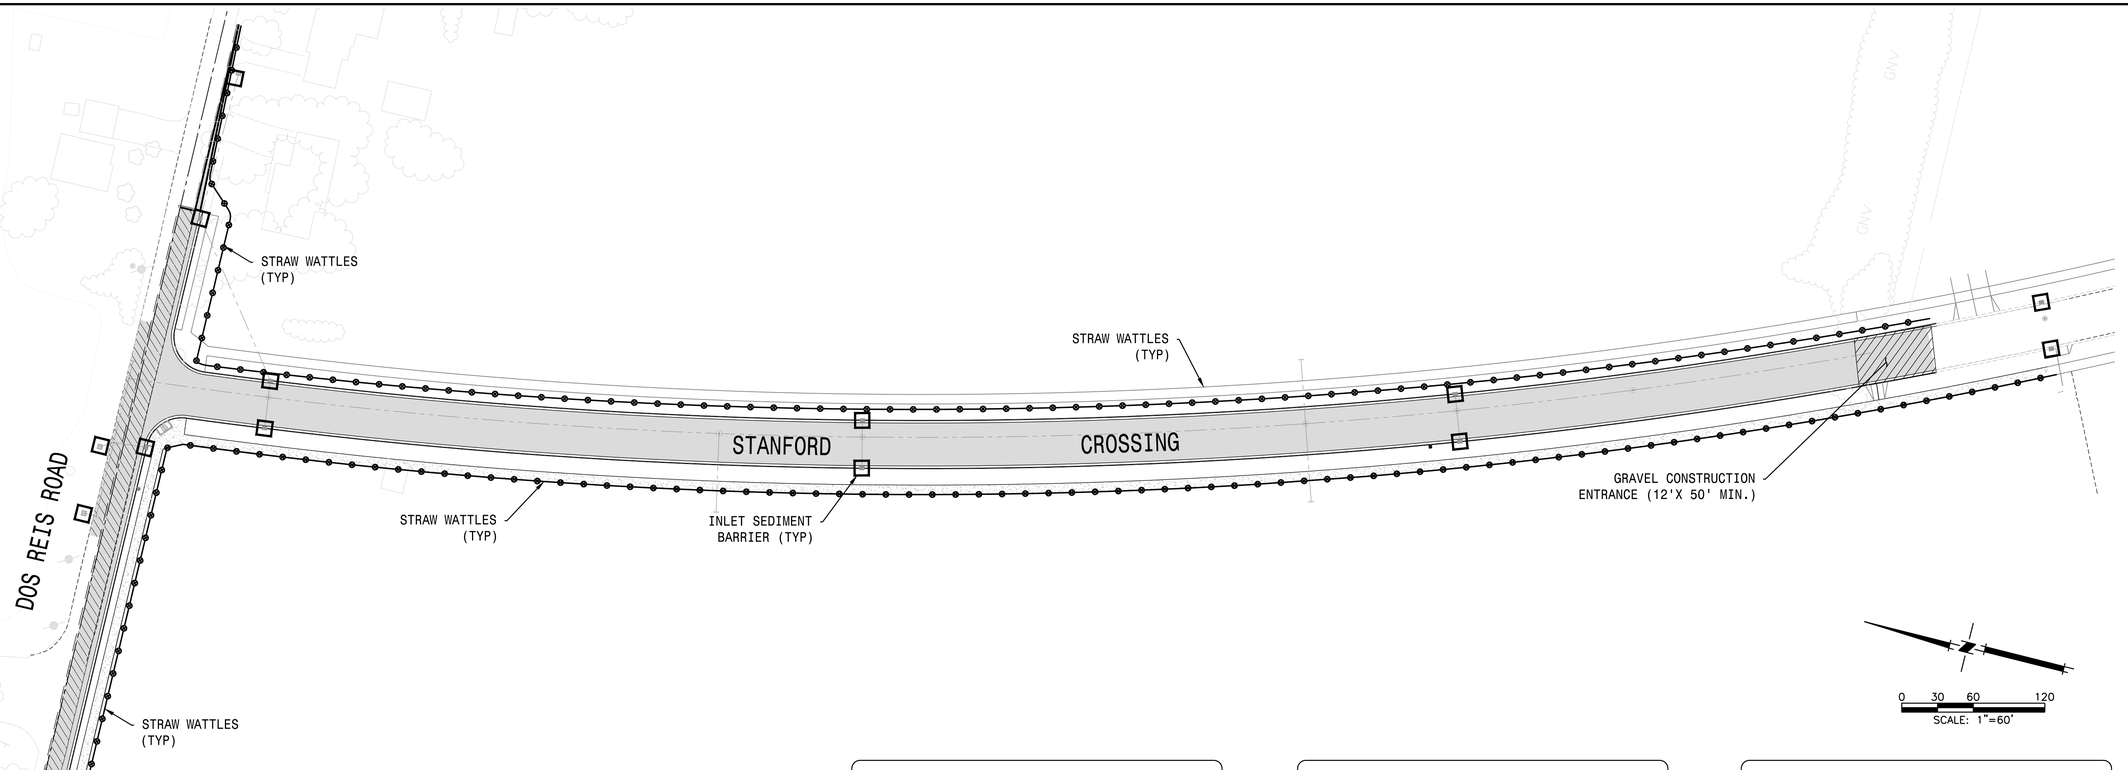
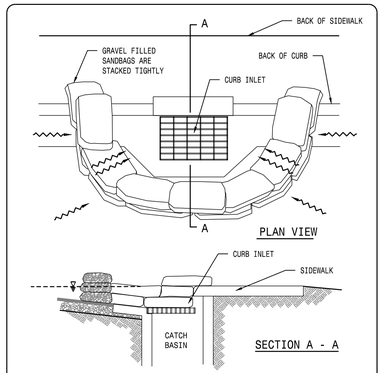
SHEET NO. C8
SHEET 8 OF 9



EROSION CONTROL NOTES:

1. EROSION CONTROL DEVICES SHOWN ON THE PLAN WHICH INTERFERE WITH THE WORK SHALL BE RELOCATED OR MODIFIED WHEN THE CITY INSPECTOR/OWNER AND QUALIFIED SWPPP PRACTITIONER (QSP) SHOULD BE DIRECTING/APPROVING THE EROSION CONTROL WORK AS NEEDED AS THE WORK PROGRESSES.
2. ALL LOOSE SOIL AND DEBRIS SHALL BE REMOVED FROM THE STREET AREAS UPON STARTING OPERATIONS AND PERIODICALLY THEREAFTER AS DIRECTED BY THE CITY INSPECTOR/OWNER AND QUALIFIED SWPPP PRACTIONER (QSP).
3. PROVIDE VELOCITY CHECK DAMS IN ALL UNPAVED STREET AREAS AT INTERVALS OF TWO FT OF VERTICAL CHANGE IN ELEVATION. VELOCITY CHECK DAMS SHALL BE CONSTRUCTED OF STAKED STRAW BALES, OR OTHER EROSION RESISTANT MATERIALS APPROVED BY THE INSPECTOR, AND SHALL EXTEND COMPLETELY ACROSS THE STREET OR CHANNEL AT RIGHT ANGLES TO THE CENTERLINE. EARTH DIKES SHALL NOT BE USED AS VELOCITY CHECK DAMS.
4. AFTER UTILITY TRENCHES ARE BACKFILLED AND COMPACTED, THE SURFACES OVER SUCH TRENCHES SHALL BE MOUNDED SLIGHTLY TO PREVENT CHANNELING OF WATER IN THE TRENCH AREA. CARE SHOULD BE EXERCISED TO PROVIDE FOR CROSS-FLOW AT FREQUENT INTERVALS WHERE TRENCHES ARE NOT ON THE CENTER LINE OF A CROWNED STREET.
5. EXCEPT AS OTHERWISE DIRECTED BY THE INSPECTOR, ALL DEVICES SHOWN SHALL BE IN PLACE AT THE END OF EACH WORKING DAY WHEN THE FORECAST OF RAIN PROBABILITY EXCEEDS 40%.
6. ALL BASINS AND CHECK DAMS SHALL HAVE BEEN PUMPED DRY, AND ALL DEBRIS AND SILT REMOVED WITHIN 24 HOURS AFTER EACH STORM.
7. HYDROSEED ALL FILL AND CUT SLOPES AS APPROVED BY CITY GUIDELINES AND / OR ORDINANCES, OR AS SHOWN ON THESE PLANS.
8. STRAW BALES SHALL BE STOCKPILED ADJACENT TO EACH POINT OF USE AS SHOWN ON THE EROSION CONTROL PLAN, READY TO BE PLACED IN POSITION WHEN THE RAIN FORECAST IS 40% OR GREATER, OR WHEN DIRECTED BY THE INSPECTOR.
9. THE EROSION AND SEDIMENT CONTROL MEASURES WILL BE OPERABLE YEAR-ROUND.
10. CHANGES TO THIS EROSION AND SEDIMENT CONTROL PLAN TO MEET FIELD CONDITIONS WILL BE MADE ONLY WITH THE APPROVAL OF OR AT THE DIRECTION OF THE CITY INSPECTOR/OWNER AND QUALIFIED SWPPP PRACTITIONER (QSP).
11. ALL PAVED AREAS WILL BE KEPT CLEAR OF EARTH MATERIAL AND DEBRIS. THE SITE WILL BE MAINTAINED SO THAT A MINIMUM OF SEDIMENT - LADEN RUNOFF ENTERS THE STORM DRAINAGE SYSTEM.
12. AS STORM DRAIN IMPROVEMENTS ARE CONSTRUCTED, ALL STRUCTURES AND INLET PIPES SHALL BE PROTECTED FROM INFLOW OF SILT BY STRAW BALE SILT BARRIER PER DETAIL. IN AREAS WHERE GRADING OCCURS BUT INLETS ARE NOT CONSTRUCTED, STRAW BALE CHECK DAMS ARE TO BE PLACED AT FUTURE INLET LOCATIONS.
13. CONTRACTOR SHALL HAVE TOOLS, EQUIPMENT, AND MATERIALS TO PROVIDE EROSION CONTROL MEASURES MADE NECESSARY BY A CONSTRUCTION OPERATION, ON THE JOB SITE BEFORE BEGINNING THAT OPERATION.
14. ADJACENT PROPERTIES SHALL BE PROTECTED FROM STORM WATERS, MUD, SILT, ETC.
15. FOR EROSION CONTROL PURPOSES, THIS PLAN ASSUMES ALL HYDROSEEDING WILL BE COMPLETED PRIOR TO THE START OF THE RAINY SEASON (OCTOBER 1 TO APRIL 15).
16. MAINTENANCE IS TO BE PERFORMED AS FOLLOWS:
    a. REPAIR DAMAGES CAUSED BY SOIL EROSION OR CONSTRUCTION AT THE END OF EACH WORKING DAY.
    b. SWALES SHALL BE INSPECTED PERIODICALLY AND MAINTAINED AS REQUIRED.
    c. SILT FENCES, BERMS AND SWALES ARE TO BE INSPECTED AFTER EACH STORM AND REPAIRS MADE AS NEEDED.
    d. SEDIMENT SHALL BE REMOVED AND SEDIMENT TRAPS RESTORED TO ORIGINAL DIMENSIONS WHEN SEDIMENT HAS ACCUMULATED TO WITHIN ONE FOOT OF OUTLET ELEVATION.
    e. SEDIMENT REMOVED FROM TRAP SHALL BE DEPOSITED IN SUITABLE AREA AND IN SUCH A MANNER THAT IT WILL NOT ERODE.
17. CONSTRUCTION ENTRANCE CONSISTING OF AN 8" THICK LAYER OF 2"-3" COARSE DRAINROCK FOR A DISTANCE OF 50 FEET IS TO BE PROVIDED AT EACH VEHICLE ACCESS POINT FROM UNPAVED ROADS TO EXISTING PAVED STREETS.
18. BORROW AREAS AND TEMPORARY STOCKPILES SHALL BE PROTECTED WITH APPROPRIATE EROSION CONTROL MEASURES TO THE SATISFACTION OF THE INSPECTOR/OWNER AND QUALIFIED SWPPP PRACTITIONER (QSP).
19. THE CONTRACTOR SHALL MEET AND FOLLOW ALL NPDES REQUIREMENTS IN EFFECT AT THE TIME OF CONSTRUCTION.
20. HYDROSEED AND/OR BLOWN STRAW SHALL BE APPLIED TO ALL GRADED AREAS PRIOR TO OCTOBER 1ST. HYDROSEED SHALL BE APPLIED TO AREAS GRADED AT 5:1 OR STEEPER. BLOWN STRAW SHALL BE APPLIED ON ALL STRAIGHT GRADED PAD AREAS LESS THAN 5:1 SLOPE. HYDROSEEDED AREAS SHALL BE WATERED UNTIL VEGETATION IS ESTABLISHED.
21. HYDROSEED SHALL BE APPLIED TO FRESHLY GRADED SLOPES WHILE SOIL REMAINS FRIABLE AND WEED-FREE.
22. ANY RELATED STANDARDS FOR GRADING, EROSION CONTROL AND LANDSCAPING MUST BE OBSERVED.
23. FIELD CONDITIONS MAY VARY AND ALTERNATIVE BMP'S MAY BE REQUIRED. THIS PLAN SHALL BE MODIFIED BY THE CONTRACTOR/ EROSION CONTROL SPECIALIST (QUALIFIED SWPPP DEVELOPER OR PRACTITIONER TO ACCOUNT FOR ACTUAL FIELD CONDITIONS.
24. THIS EROSION CONTROL PLAN HAS BEEN PREPARED TO MEET CITY OF LATHROP STANDARDS ONLY. IT REQUIRES A PROJECT SWPPP BE PREPARED BY A QUALIFIED SWPPP DEVELOPER (QSD) WHO WILL ASSUME RESPONSIBILITY FOR PROJECT COMPLANCE WITH THE STATE GENERAL CONSTRUCTION PERMIT AND WHOSE RECOMMENDATIONS WILL SUPERCEDE THIS PLAN ACCORDINGLY.
25. ANY REVISIONS TO THE APPROVED PLANS SUBMITTED TO THE STATE BOARD SHALL BE DOWNLOADED ONTO THE STATE REGIONAL WATER BOARD SMARTS DATABASE BY THE LEGAL RESPONSIBLE PARTY OR THEIR DESIGNEE.



NOTES:
1. TO BE INSTALLED & MAINTAINED IN ACCORDANCE WITH CASQA STANDARD SE-10.
2. PLACE CURB TYPE SEDIMENT BARRIERS ON GENTLY SLOPING STREET SEGMENTS, WHERE WATER CAN POND AND ALLOW SEDIMENT TO SEPARATE FROM RUNOFF.
3. SANDBAGS, OF EITHER BURLAP OR WOVEN GEOTEXTILE FABRIC, ARE FILLED WITH GRAVEL, LAYERED AND PACKED TIGHTLY.
4. LEAVE ONE SANDBAG GAP IN THE TOP ROW TO PROVIDE A SPILLWAY FOR OVERFLOW.
5. INSPECT BARRIERS AND REMOVE SEDIMENT AFTER EACH STORM EVENT. SEDIMENT AND GRAVEL MUST BE REMOVED FROM THE TRAVELED WAY IMMEDIATELY.

NOTES:
1. CONSTRUCTION ENTRANCE SHALL BE INSTALLED & MAINTAINED IN ACCORDANCE WITH CASQA STANTARD DETAIL TC-1.
2. THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION THAT WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHT-OF-WAYS. THIS MAY REQUIRE TOP DRESSING, REPAIR AND/OR CLEANOUT OF ANY MEASURES USED TO TRAP SEDIMENT.
3. WHEN NECESSARY, WHEELS SHALL BE CLEANED PRIOR TO ENTRANCE ONTO PUBLIC RIGHT-OF-WAY.
4. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH CRUSHED STONE THAT DRAINS INTO AN APPROVED SEDIMENT TRAP OR SEDIMENT BASIN.

GENERAL NOTES

1. The landscape drawings are part of and intended to be complementary to the drawings of the civil engineer and of other disciplines. Prior to start of Work, review all drawings, documents, and reports associated with this project and coordinate the work of the landscape drawings with the work of the other disciplines as necessary to ensure a fully complete and coordinated installation.
2. Prior to start of work, thoroughly review all Contract Documents and become thoroughly familiar with the requirements and the intent of these documents including all contract requirements.
3. Prior to start of any work, obtain all necessary permits from the City, State and all other agencies having jurisdiction over the work.
4. Prior to start of construction and as necessary throughout the progress of the Work, contact the Underground Service Alert with minimum 48 hours notice, and have all underground utilities and facilities marked in the field and verify by pot holing, the types, locations, sizes and/or depth of existing utilities within the work area. In the event existing utilities are discovered to be in conflict with the work required of the Contract Documents, immediately notify the Owner and the affected utility company in the most expeditious means available and later confirm in writing. Determine exact locations of all utilities and facilities and implement appropriate and effective measures to protect them.
5. Protect all existing monuments and other survey markers on the project site. Record the location of all monuments and other survey markers prior to the start of work. All such monuments or markers disturbed or destroyed during construction shall be replaced by a licensed surveyor at the Contractor's expense.
6. If during the course of any excavation evidence of archaeological resources including but not limited to artifacts and human remains are encountered, immediately stop all work and activities that may damage or destroy such resources and notify the Owner. Do not re-start affected work and activities until the Owner has provided direction to do so.
7. All work shall conform to applicable governing codes. At commencement of construction Owner and Contractor shall be responsible to consult with applicable agencies to determine if applicable codes, regulations, or governing ordinances have changed and determine if changes to the plans are required to comply with requirements. Changes to plans for updating due to these changes shall be solely the responsibility of the Owner.
8. All traffic controls shall be in conformance with Caltrans Manual of Traffic Controls and these Contract Documents.
9. Verify all work described in the Drawings for dimension, grade, extent, and compatibility with existing site conditions. Any discrepancies and unexpected conditions that affect or change the work described in the contract documents shall be brought to the Landscape Architect's attention immediately. Do not proceed with the work in the area of discrepancies until all such discrepancies are resolved. Proceeding with affected work prior to acceptable resolution will be at Contractor's own risk and may require the Contractor to remove and replace work and execute extra work at no additional cost to the Owner.
10. Omissions from the Drawings or Specifications or the misdescription of any work, which is manifestly necessary to carry out the intent of the Drawings and Specifications, or which is customarily performed, shall not relieve the Contractor from performing such omitted or described details of the work. Contractor shall perform such work as if fully and completely set forth and described in the drawings and specifications.
11. Written dimensions shall take precedence over drawing scale or proportion. Larger scale drawings shall take precedence over small scale drawings.
12. Removal and replacement limits of any existing feature shown on the Drawings are for general reference only. Actual limits shall be as required by the new work and shall be verified in the field with Owner.
13. RECORD DRAWINGS: Maintain one set of Contract Documents on site for use in documenting current progress of work and all changes. Document progress and changes with red, indelible ink. Make documents available to Landscape Architect for review at all site visits and as requested. Draft all changes in CAD files copy and note changes to specifications on copies of the original specifications using indelible black or red ink as directed. Unless otherwise specified, these shall serve as the Record Documents that must be submitted prior to final payment.
14. The Owner may have other work within this project area being executed under separate contracts by other contractors ("others") concurrently with the execution of work covered by these documents. Contractor shall coordinate work of this contract with work of others as necessary to ensure the proper interface of this work with work of others and by such means, methods, and timing that the work of others is not impeded.

PLANTING NOTES

1. Examine site conditions and locate utilities prior to start of work. Report any conflicts to Owner or Landscape Architect prior to starting work. Start of work implies acceptance of site conditions.
2. Confirm all plant quantities. The quantity of symbols on the plan shall have priority over the quantity provided in the legend.
3. Contractor is responsible for maintaining current condition of existing landscape to remain. Any damage that occurs to landscape after start of work shall be repaired or replaced at no additional expense to the Owner.
4. The contractor shall be responsible for the purchasing of all material to provide a complete installation per the intent of the contract documents.
5. The contractor is responsible for the protection of all material until the project has been completely turned over to the owner.
6. Landscape Architect reserves the right to review plant material prior to planting. Plant material may be rejected at any time due to condition, form, or damage, before or after planting. Installed and then rejected material shall be replaced by the contractor at contractor expense.
7. All plant material to be nursery grown in a climate similar to that of the project site. All plant material shall:
   - 7.1. Be vigorous and of normal habit of growth.
   - 7.2. Be pest and disease free, including insects, insect eggs and larvae.
   - 7.3. Be free of girdling roots, sun scald, abrasions, disease
8. Plants shall equal or exceed the standards as outlined by the American Standards for Nursery Stock and to applicable California Agriculture Code.
9. The landscape contractor shall, prior to installation of any plant material, provide for a Soil Agronomy Report (per WELO) from an approved soils laboratory that shall include recommendations for amending and preparing soil. Provide report to landscape architect for review and further direction regarding soil amendments and preparation. Soil analysis shall include: soil texture, infiltration rate, soil pH, total soluble salts, sodium, and percent organic matter.
10. Prepare the soil by removing all rock and debris larger than 1" from planting areas; legally dispose of materials removed from this process.
11. Amend the soil per the recommendations of the Soil Agronomy Report, including any additional amendments specified by the landscape architect, prior to the installation of plant material. Provided below is a list of minimum amendments that shall be incorporated into all planting pits and broadcast into soil to depth of 12", by means of a roto-tiller or equal, per 1000 square feet. This list is provided for Bid purposes and shall be augmented as recommended by the Soils Agronomy Report.
    - 4 cyds organic amendment. Cow manure or nitrogen-treated sawdust or ground bark humus
    - 15 lbs. soil sulfur
    - 15 lbs. 15-15-15 fertilizer
12. Notify landscape architect if site soil has been lime treated. Additional testing may be required to determine extent of lime treatment, compaction, or other condition that may be deleterious to healthy plant growth.
13. Provide weed control prior to planting. Thoroughly irrigate the site to promote germination of weed seeds that may be in the soil. Once germination has taken place spray the site with approved herbicide, (Round-Up or equal) at the rate specified by the manufacturer. Reapply as needed.
14. Planting pits for trees shall be excavated per the details provided in these plans. Planting pit backfill mix for all trees and shrubs shall consist of the following:
    - 6 parts 'on-site' soil
    - 4 parts organic amendment (same as described above)
    - 1 lb./yd. of mix 12-12-12 commercial fertilizer
    - 2 lbs./cu. yd. of mix Iron Sulfate
    - 10 lbs./cu. yd. of mix Agricultural Gypsum
15. Fertilizer tablets (20-10-5) to be placed in all planting pits in the following quantities per plant container size:
    - 1 gallon 1 tablet
    - 5 gallon 3 tablets
    - 15 gallon 9 tablets
    - 24" box 9 tablets
    - 36" box 15 tablets
16. Plant establishment period of ninety (90) days shall commence upon notice of Substantial Completion. Maintain all plant material throughout duration of plant establishment period to a point accepted by the Landscape Architect or Owner's Representative. See Planting Specifications for additional information.
17. Trees to be planted a min. of 5'-0" from edge of paving or walls, U.O.N.
    - 17.1. Tree planting shall conform to minimum distances away from lights or other utilities, as published in the local jurisdictions standards or guidelines.
18. Groundcover shall be installed continuous under all shrub masses, U.O.N.
19. Install vines with runners securely attached to the adjacent wall or trellis. Remove nursery stakes prior to completion of plant establishment period, unless otherwise directed by owner or landscape architect.
20. Prior to placing mulch, apply pre-emergent weed control, (Ronstar, or approved equal) in the amounts specified by the manufacturer.
21. Uniformly place a minimum 3" depth of recycled, organic mulch (3/4" - 1-1/2" chip size) over all shrub areas. Do not install mulch at turf areas. Color: Brown (un-dyed).
    - 21.1. "Gorilla Hair" is not acceptable unless specifically noted.
    - 21.2. Do not install bark mulch in areas of inundation (e.g. - bio-swale or basin). Place min. 3" layer of crushed aggregate mulch ($\frac{3}{4}$") in these areas in place of the bark mulch. Transition back to bark mulch at top of slope, U.O.N. Submit sample for approval.

IRRIGATION NOTES

1. Contractor shall become familiar with the drawings, specifications, and site conditions prior to beginning work. Should conflicting information be found in these documents or between these documents and site conditions, notify the Landscape Architect before proceeding with the work in question.
2. All existing utilities, water lines, and fire hydrants shall remain connected and in full continuous operation unless specifically directed otherwise.
3. Irrigation design is based on a minimum 55 psi and maximum 70 psi static water pressure at the point of connection after the meter. Verify prior to ordering materials or starting work. Notify the Landscape Architect if water pressure differs from pressure on which the design is based. Variation from design pressure may require changes and additions to the equipment specifications.
   - 3.1. Booster Pump: If verified static pressure is less than minimum required design pressure, provide a booster pump as appropriate to yield the required minimum pressure based on anticipated maximum and minimum flows required for system to operate within water window requirements.
   - 3.2. Pressure Regulator: If verified static pressure is more than maximum design pressure, provide a pressure regulator as appropriate to yield the required pressure based on anticipated maximum and minimum flows required for system to operate within water window requirements.
4. Irrigation plan is diagrammatic. Actual routing of pipe and location of equipment shall be determined based on field conditions and as directed by the Landscape Architect. Install pipe and equipment in landscape areas wherever possible unless specifically noted otherwise. Stake layout of mainline and primary laterals for field review and approval prior to trenching. Field adjust existing irrigation system as necessary.
5. Pipe Sizing:
   - 5.1. Minimum pipe size shall be 3/4".
   - 5.2. Unlabeled pipe segments shall be equal to the size of the segment immediately upstream.
   - 5.3. In making adjustments to irrigation zone layouts Contractor shall be responsible to determine pipe sizes as required to deliver water pressure required for each outlet device considering flow rate, elevation changes, length of run, and other factors affecting pressure loss. Maximum flows in various pipe sizes shall not exceed the following guidelines. Flows may need to be significantly less than the maximums stated below to off-set other factors affecting pressure loss:
     - 5.3.1. 3/4": up to 8 gpm.
     - 5.3.2. 1": 8-12 gpm.
     - 5.3.3. 1-1/4": 12-22 gpm.
     - 5.3.4. 1-1/2": 22-30 gpm.
     - 5.3.5. 2": 30-50 gpm.
   - 5.4. Mainline pipe sizes shall not be changed without written approval of the Landscape Architect.
   - 5.5. Lateral line pipe runs of lengths greater than the typical distance between outlet devices shall not be made without written approval of the Landscape Architect.
6. Do not install the irrigation system as shown on the drawings when it is obvious in the field that obstructions, grade differences or differences in the area dimensions exist that might not have been considered in the engineering. Notify the Landscape Architect of all such conditions immediately upon discovery. In the event this notification is not provided, the Contractor shall assume full responsibility for all revisions necessary in response to field conditions with no additional compensation.
7. Controller(s):
   - 7.1. Locate as directed. Extend electrical service to controllers and dedicate one breaker of proper size for each controller. Provide one additional duplex outlet at each controller location.
   - 7.2. Electrical service to controllers shall be completed by a licensed electrical contractor in accordance with all applicable codes.
8. Sleeves:
   - 8.1. All pipe under existing and proposed paving shall be installed in sleeves.
   - 8.2. Sleeves are shown for contractor's convenience. Contractor shall be responsible to coordinate irrigation sleeve locations and installation with other trades.
   - 8.3. Extend all sleeves 18 inches beyond paving, cap and clearly mark by approved means to facilitate recovery.
   - 8.4. Install sleeves to accommodate future paving where indicated or as may be needed.
9. Spray Heads and Rotors:
   - 9.1. Install perpendicular to grade unless otherwise noted in plans.
10. Drip Emitters:
    - 10.1. Install drip supply lines minimum 3" below grade.
    - 10.2. Located emitters 3"-6" from main trunk or stem.
    - 10.3. Include bug-guard and galvanized stake(s) for each emitter.
11. Contractor to flush entire system and adjust all delivery devices and assemblies for complete coverage and reduced over-spray, prior to project completion.
12. An irrigation audit shall be completed by a Certified Landscape Irrigation Auditor in conformance with the jurisdictional Water Efficient Landscape Ordinance (WELO or MWELO). The audit shall be provided to the jurisdictional agency for review and approval.

Upon completion of the Project, Contractor shall be responsible for certifying compliance with the Ordinance and Agency requirements. Prior to start of Work, Contractor shall review this information and the Ordinance to establish a full understanding of the measures necessary to meet requirements of the Ordinance. Contractor shall notify the Owner of anything the Contractor feels does not meet the requirements of the Ordinance or Agency requirements. Landscape work shall not commence until such concerns are corrected to the satisfaction of all parties.

SOILS MANAGEMENT REPORT
This project will require significant earthwork and/or construction activity. The type of soil in the proposed landscape areas cannot be sufficiently assessed until the earthwork and construction is substantially completed. Per §492.5 paragraph (a) (2) (B) of the State Ordinance, Contractor shall, upon completion of the earthwork operations, acquire soil samples representative of all landscape areas and have the samples analyzed by an approved laboratory in accordance with §492.5 paragraph (a) (1) of the State Ordinance. Contractor shall submit the approved soil laboratory's recommendations for amending the soil as appropriate for the proposed planting in a timely manner to allow for modifications to the design plans and specifications as may be required. Contractor shall amend soil in accordance with the laboratory recommendations unless otherwise directed.

LANDSCAPE DESIGN PLAN
See Planting Plan of this set of drawings.

I have complied with the criteria of the ordinance and applied them accordingly for the efficient use of water in the irrigation design plan and the landscape design plan.

MAINTENANCE SCHEDULE

A regular maintenance schedule shall be set up for this project to provide healthy plants and an efficient, functional irrigation system. The following practices shall be incorporated into a regular maintenance schedule:

1. Maintain irrigation system. Adjust or replace delivery system components to keep them working to meet manufacturer specifications. Repair leaks in a timely manner. Replacement products and materials shall match originally specifications, or equal..

2. Review drip emitters and adjust locations as plants mature. Replace emitters as needed to adjust water delivery to each plant, as needed.

3. Adjust controller as required to provide proper amount of water to each zone.

4. Mow turf on a regular basis. De-thatch and aerate annually.

5. Prune plantings to maintain design form (e.g.- natural, hedge) and to remove broken or dead branches. Remove suckers from tree roots on a regular basis.

6. Establish a regular program of weed and pest control. Conform to any local regulations regarding use of pesticides and herbicides. Pesticides and herbicides are to be applied only when needed and by a state licensed professional.

7. Re-apply mulches as needed to maintain full coverage at planting areas, retain soil moisture, and inhibit weed growth.

PRELIMINARY IRRIGATION SCHEDULES

The schedules below are based on calculating runtime and frequency of irrigation cycles to meet the average evapotranspiration of noted seasons factoring in the rate of water delivery, plant factors, and other variables. Actual runtimes and frequency of cycles required to sustain the landscape at the desired aesthetic appearance may differ and must be adjusted to due to field observations of microclimates, slope conditions, solar exposure, and other variables. Contractor shall observe the health of the plantings during the establishment period and make adjustments necessary from observed conditions and plant health.

After the establishment period it is incumbent upon the Owners and Owner's maintenance entity to observe plant health and desired aesthetic appearance and make adjustments to the irrigation schedules as may be required to satisfy their desired aesthetic appearance as well as limit water use to less than the MAWA.
